Better Equipment installed by Qualified Professionals

X-tremeWire LLC took a different approach from day one. We have educated the consumers and have shown them how to spend their money more wisely.

You always OWN the system including the wire in the walls -

Do you know that if you have a system installed by the big corporations that you usually don't own any of it? You don't even own the wire they fished into your walls or buried in the ground, even though you paid them to put it there. Chances are high that if you read through your contract carefully, that you are actually leasing the system. At the end of the contract if you decide to cancel their service, they have the right to come and remove all of the equipment including the wires they ran! Why do they do this? So they can depreciate the equipment and pay less taxes. You'll have to pay the next company to come out and install a whole new system. **With X-tremewire, YOU ALWAYS OWN THE SYSTEM, unless you choose to lease it with a \$1 buyout!**

Employee Training

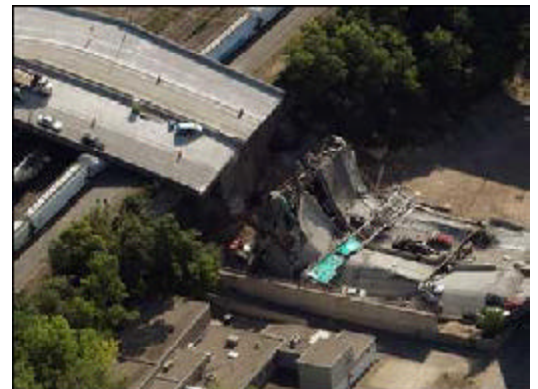

We pride ourselves on staying up to date on today's and tomorrow's technologies. We currently have licenses and certificates from Sencore, HAA (Home Acoustics Alliance), ISF (Imaging Science Foundation), IFS (International Fiber-optic Systems), RTI (RF Training Institute), Netstreams, and more. When evaluating potential installers check their training credentials, you'll find that very few have this type of training.

Local Service / Annual Check-ups

We take great pride in our installations and do the job right the first time, so you won't have to spend your hard earned money having us out there to fix your system on a regular basis. In the event that you do need service though, we're only a phone call away. In most cases we can be out there the same day or the next day to take care of your issues. We build in annual system inspections and maintenance into our service agreements so you can be assured that your system is working properly when you need it.

You've Seen Our Work

If you're one of the 5 billion people on the planet that has access to a television or the internet chances are good that you've seen our work in action. It was one of our security camera installations that captured the I35w bridge collapse. We also have many local bars, restaurants, banks and more that use our services.

Free Consultations

We will meet with you and discuss your audio / video and security needs for FREE! When you call X-tremeWire LLC you'll be speaking with someone who **KNOWS WHAT THEY ARE TALKING ABOUT!** We sell and install systems that deliver **"REAL SECURITY"**, not just the illusion of protection crafted by some big corporations marketing department. Our consultant will be heading up your installation from filling out the paperwork, to ordering the parts, to installing the equipment and teaching you how to use it. This has worked great for us and has made us one of the top contractors in the area.

Best Warranty in the Business / Best Satisfaction Guarantee Anywhere!

Most of the equipment we sell comes with a 2 or 3 year manufacturer's parts warranty. We back that up with a full one year labor warranty as well at no charge to you. We want you to be happy with your system, so we also offer a 100% satisfaction guarantee on the products we install at the time of installation.

Products and Services:

- Security / Fire Alarm Systems
- UL Listed Alarm Monitoring
- Closed Circuit Television
- Telephone / Video Systems
- Access Control
- Paging/Background Music
- Telephone / Video Systems
- Home Theater
- Distributed Audio
- ISF Video Calibration
- HAA Audio Calibration
- Indoor Entertainment facilities, game rooms, golf and hunting simulators
- Trenching of conduit & cable
- Material Relocation - Debris Removal
- Skid Loader - Small Backhoe Work
- Digging and Pouring of up to 24" Concrete Footings for buildings, decks, posts, light poles, etc
- Acoustical treatments
- Professional Sound System Installation
- Underground Boring - Trenching of conduit & cable

Training Certifications

**Minnesota State Board of Electricity
Technology Systems Contractor
Power Limited Technician(s)**

Demonstration Facilities

Demo the system before you buy! We don't waste your money by spending several hundred thousand dollars on fancy showrooms... instead we install these systems in our own homes and offices to allow you to check them out before you make your purchase. We don't sell the "illusion" of security. You won't see us putting up fake cameras or installing worthless systems. When our sign is on the door, criminals know that you mean business.

Security / CCTV Systems Overview

Security / Fire / Posion Gas Systems & Monitoring

X-tremeWire security systems can be configured to monitor doors and windows, but they can also detect smoke, heat, carbon monoxide, freezing temperatures, and rising water. For persons with medical conditions, system sensors can be set to go into alarm if there has been no activity in a prescribed period of time, indicating a possible medical emergency.

Systems commonly include alarm verification technology that greatly reduces the chance of false alarms. Before authorities are dispatched, operators use audio verification to be in voice contact at the alarm location. If the alarm is accidental, the user can cancel the alarm by providing an authorized user code. If the code is not provided, the authorities are dispatched.

Security, fire, and access control systems are effective in preventing loss of life and property. What types of security and how much you need can only be determined on a case-by-case basis. Whatever your needs, X-tremeWire has the solution. Insurance companies commonly offer discounts of 10% or more when premises are protected by electronic security systems. An X-tremeWire security system is designed to protect your family and property, whether you are on the premises or away.

MONITORING AS LOW AS \$14.95 PER MONTH!

Why are you spending more money than you need to on monitoring? Our monitoring services are performed in the good old USA, they are UL listed, and have redundant backup systems in place in the event of natural disasters, etc. We offer additional services like video monitoring, opening and closing reports, and more.

Video Security (CCTV)

Closed Circuit Television is an indispensable element in a variety of security driven applications. In retail stores, experts report that inventory shrinkage typically originates at the point of sale. It is estimated that three times as much shrinkage occurs at the cash register than anywhere else in the store. Shrinkage drops dramatically when point-of-sale data is recorded with a complete picture of exactly what was purchased, by whom, and through which salesperson. Overt cameras on the sales floor act as a deterrence to external and internal theft by shoplifting. In major business complexes, management can use Closed Circuit Television (CCTV) to supervise parking areas, high risk storage facilities, and critical access points. Closed circuit television is commonplace in manufacturing environments where process monitoring is required.

We'll help you design a system to fit your companies needs & budget with any or all of the following features.

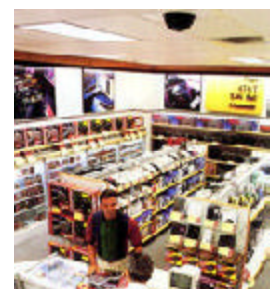

Digital Recording with Ethernet Capabilities

Local or Remote Video Monitoring via PC

Alarm Video Verification

Pan-tilt-zoom Cameras

Cash Register Receipt on Video Tape

Audio / Video Systems Overview

Distributed Audio / Video System

Enjoy high quality sound & video all around! Imagine being able to listen to the same or different music in every room of your business - at the same time, and all from one system. Perhaps you have a CD player or other audio source located in your back office, but you'd like to play it throughout the building. With distributed A/V, easily enjoy the music and video you want, wherever and whenever you want to. And, we don't stop at giving you music everywhere - we also provide different kinds. Enjoy FM Radio, CDs, "digital" music like MP3's, Sirius / XM Satellite Radio, and more, with our music products. Speakers can be installed into ceilings and walls, providing sound all around, and a total experience you've dreamed of. These can be used for background music, or for a full surround sound system. Most of our systems are IP based so you can control them with a Keypad, Touchpanel, Computer, Remote Control, or even your PDA!

HDTV

We take the guesswork out of HDTV, and get you the picture you want, at a price you can afford. It seems like every where you go people have a different expectation and definition of just what HDTV is. This is because there have been several different standards of Digital TV since it's introduction in 1998. People are confused, because HDTV signals can now come over the air, satellite or cable, and you need a special receiver to decode the signals. There are many different types of Digital Television each with unique resolution, formats and types of equipment. We will provide you with a Distributed High Definition infrastructure that will allow you to watch local, satellite, or dvd high definition movies, programs or sporting events from any TV in the business.

Structured Wiring / Media Systems Integration

Wiring standards and methods are the last thing any low voltage company will want to speak with you about because 95% of companies have no clue how to properly wire a home or business for the systems that they are putting in today and that you will be upgrading to in the future. X-tremeWire has been wiring for this technology for over 10 years (5 years before most of it was even available to the public).

Theater / Presentation Rooms

The word "Custom" gets loosely thrown around in today's marketplace. I've seen the big box stores (you know the ones I speak of) sell "custom" systems for years that are anything but that. X-tremeWire will design and install a system that fits your room, sounds and looks good, no matter what your budget. We've designed systems from \$2,000 all the way up to \$150,000! Did you know that the room conditions are the SINGLE biggest factor in overall system performance?

Outdoor Installations

Ah, the great outdoors. X-tremeWire can install weather resistant speakers, cameras, and video systems designed to stand up to the elements, so you don't have to worry about bringing them inside, no matter the climate. We have systems that mount to your business or blend into the landscape. We can integrate video, communications, and automation into the system as well. Change the temperature of the pool or hot tub, control the lighting, sound and video all from the convenient touchpanel or wireless remote control. We also trench, plow and bore underground cable, conduit and wire ourselves, so you won't have to hire a separate contractor.

Do it Yourself Installations

Traditionally you would have to do months and months of research, pick the equipment, buy the equipment, install the wiring, install the equipment, program and set it up and finally ENJOY IT!

Most people will find this task to be too frustrating. It's also possible that your trial and error may cost you more money and time in the long run, than professional installation would have!

Still convinced you can do it yourself? Okay we're here to help. We have designed the "X-treme Wiring Guide" for the tech savvy customer who wants to do the job themselves and save some money.

Here's what you get when you purchase the cables, supplies, and components from us...

Quality components that fit well together at any price range

Professional System Design and Layout to include room analysis

A color coded blue print showing you what wires to run to each location

A free copy of the X-tremeWiring Guide on disk

SAVE MONEY - We'll sell you the cable, supplies, interconnects and equipment well below retail.

Need tools to do the job? We have a full rental program with everything you could need.

Frustrated? We can help at any point in the project. For \$50 per hour we'll come out and give you advice along the way. If you bit off more than you can chew, we can even finish the project for you.
